

jolla

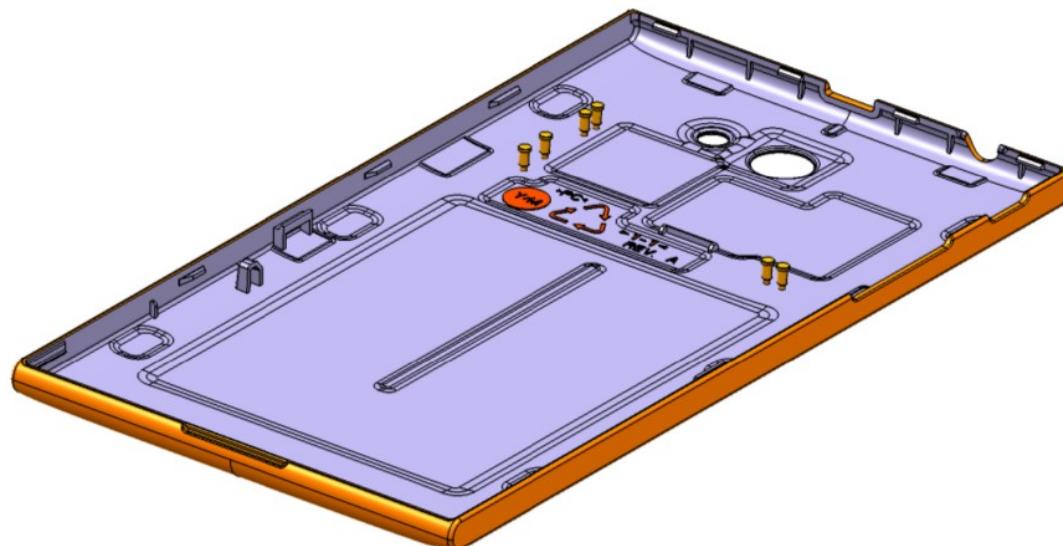

Specifikace

- Qualcomm 1.4 GHz Dualcore
- 16 GB / 1 GB / uSD
- GSM / 3G / 4G LTE
- 4.5“ 960x540
- 2MPix, 8MPix + LED blesk
- Wifi b/g/n, BT, AGPS, Glonass, USB2.0
- Gyro, kompas, akcelerometry, RGB led
- Aktivní potlačování šumu
- 2100 mAh

The Other Half

- Ambience Cover
- External Charger Cover
- Bluetooth Cover
- Generic I2C device

TOH - Ambience

- I am first one
- Makia
- Angry Birds

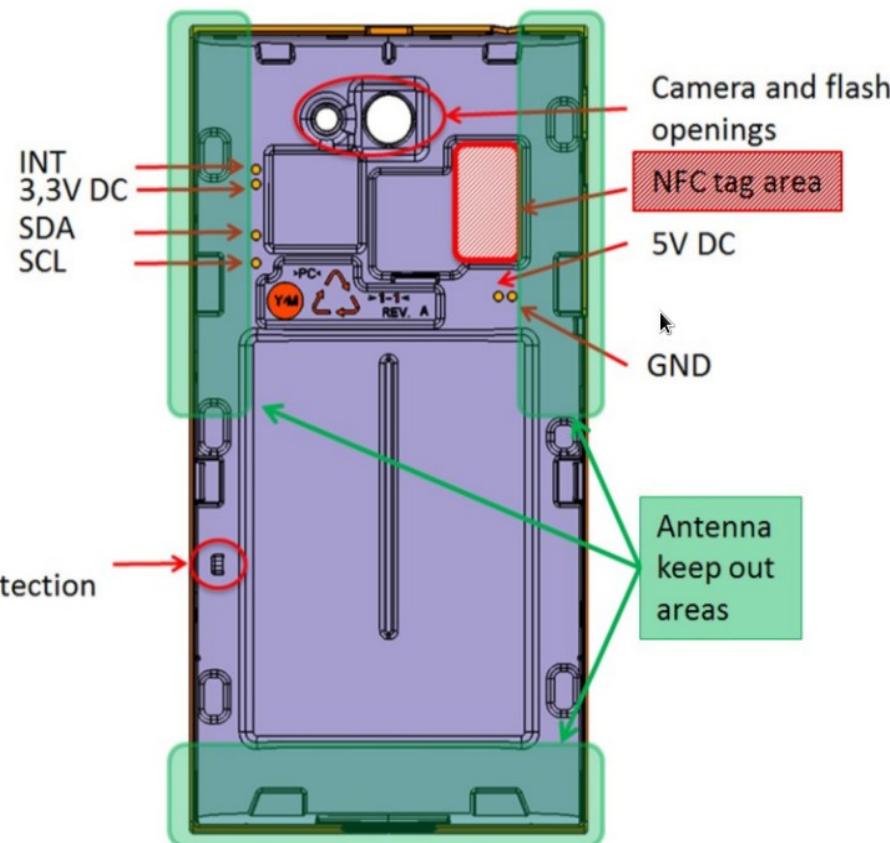

```
{  
    "translationCatalog" : "ambience-template",  
    "displayName" : "ambience-template-name",  
    "ringerToneFile" : { "file": "template-ringtonewav", "enabled": 1 },  
    "messageToneFile" : { "file": "template-messagewav", "enabled": 1 },  
    "mailToneFile" : { "file": "template-emailwav", "enabled": 1 },  
    "internetCallToneFile" : { "file": "template-imwav", "enabled": 1 },  
    "chatToneFile" : { "file": "template-chatwav", "enabled": 1 },  
    "calendarToneFile" : { "file": "template-calendarwav", "enabled": 1 },  
    "clockAlarmToneFile" : { "file": "template-alarmwav", "enabled": 1 },  
    "wallpaper" : "template.jpg",  
    "highlightColor" : "#FF9D80",  
    "secondaryHighlightColor" : "#FF9D8099",  
    "primaryColor" : "#FFFFFF",  
    "secondaryColor" : "#FFFFFF99",  
    "ringerVolume" : 70,  
    "favorite" : true  
}
```

TOH – External Charging

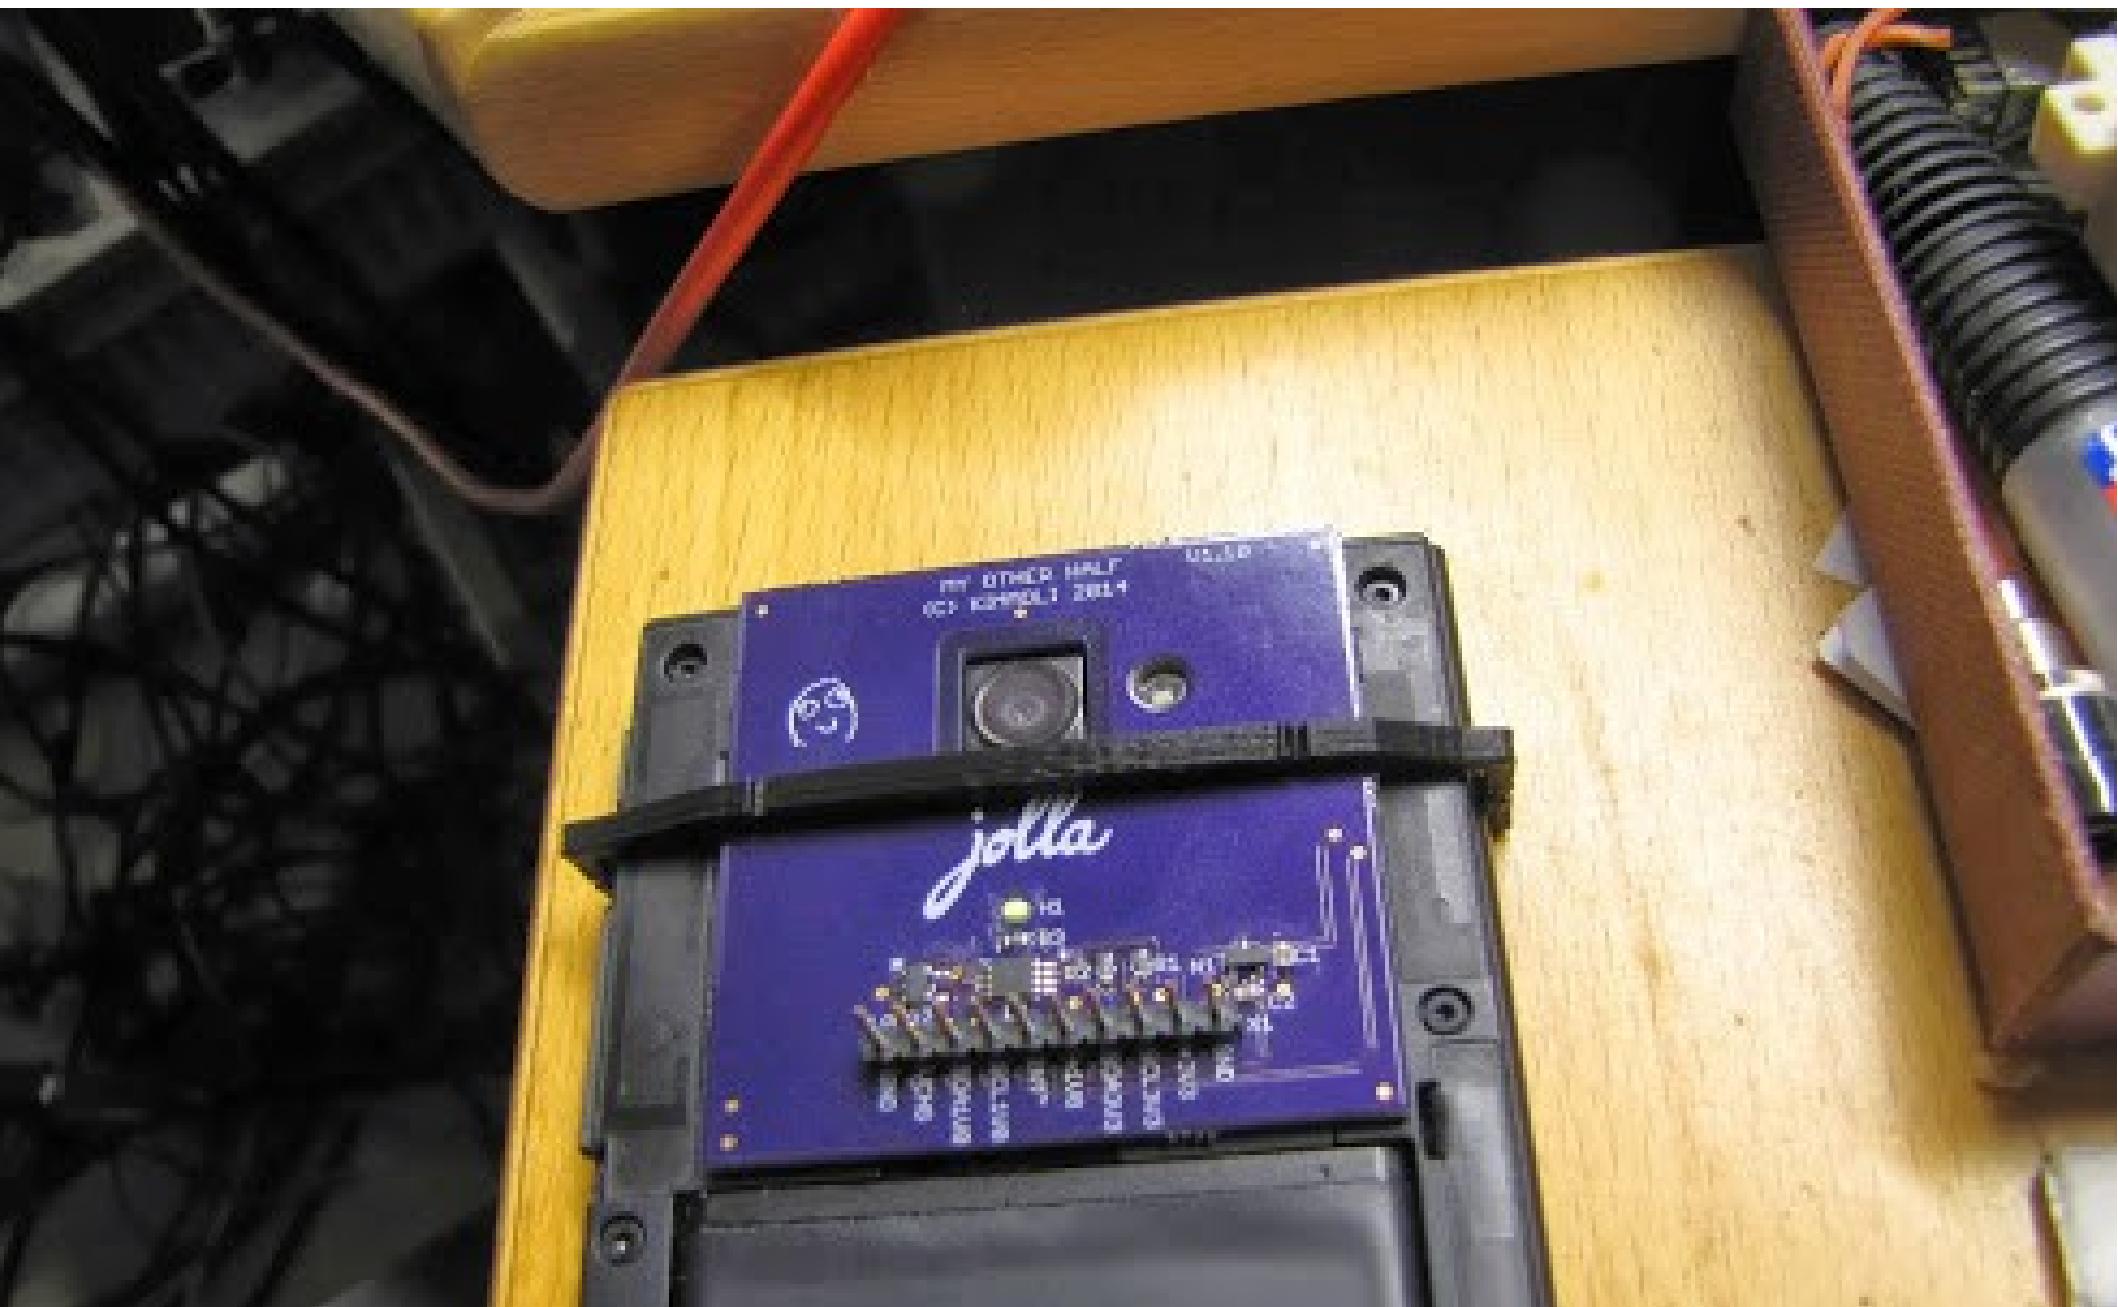

TOH – Generic I2C device

- 5V DC input pin (1000mA max)
- VDD - 3,3V DC output pin (300mA max)
- SDA – I2C data (1,8V level)
- SCL – I2C clock, frequency 400kHz (1,8V level)
- INT – Signal for interrupt host system (1,8V level)
- GND – Ground of signal and power

TOH – I2C to 3.3V

TOH - OLED

TOH - OLED

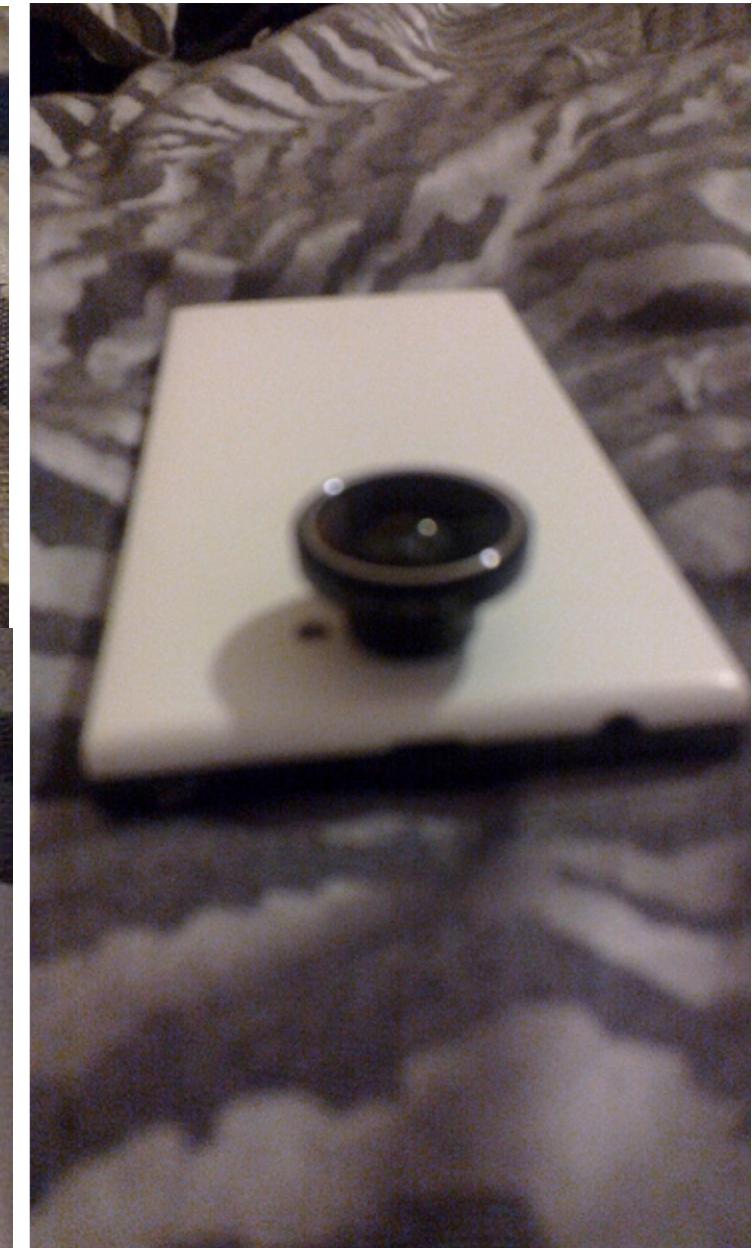

TOH – Klávesnice

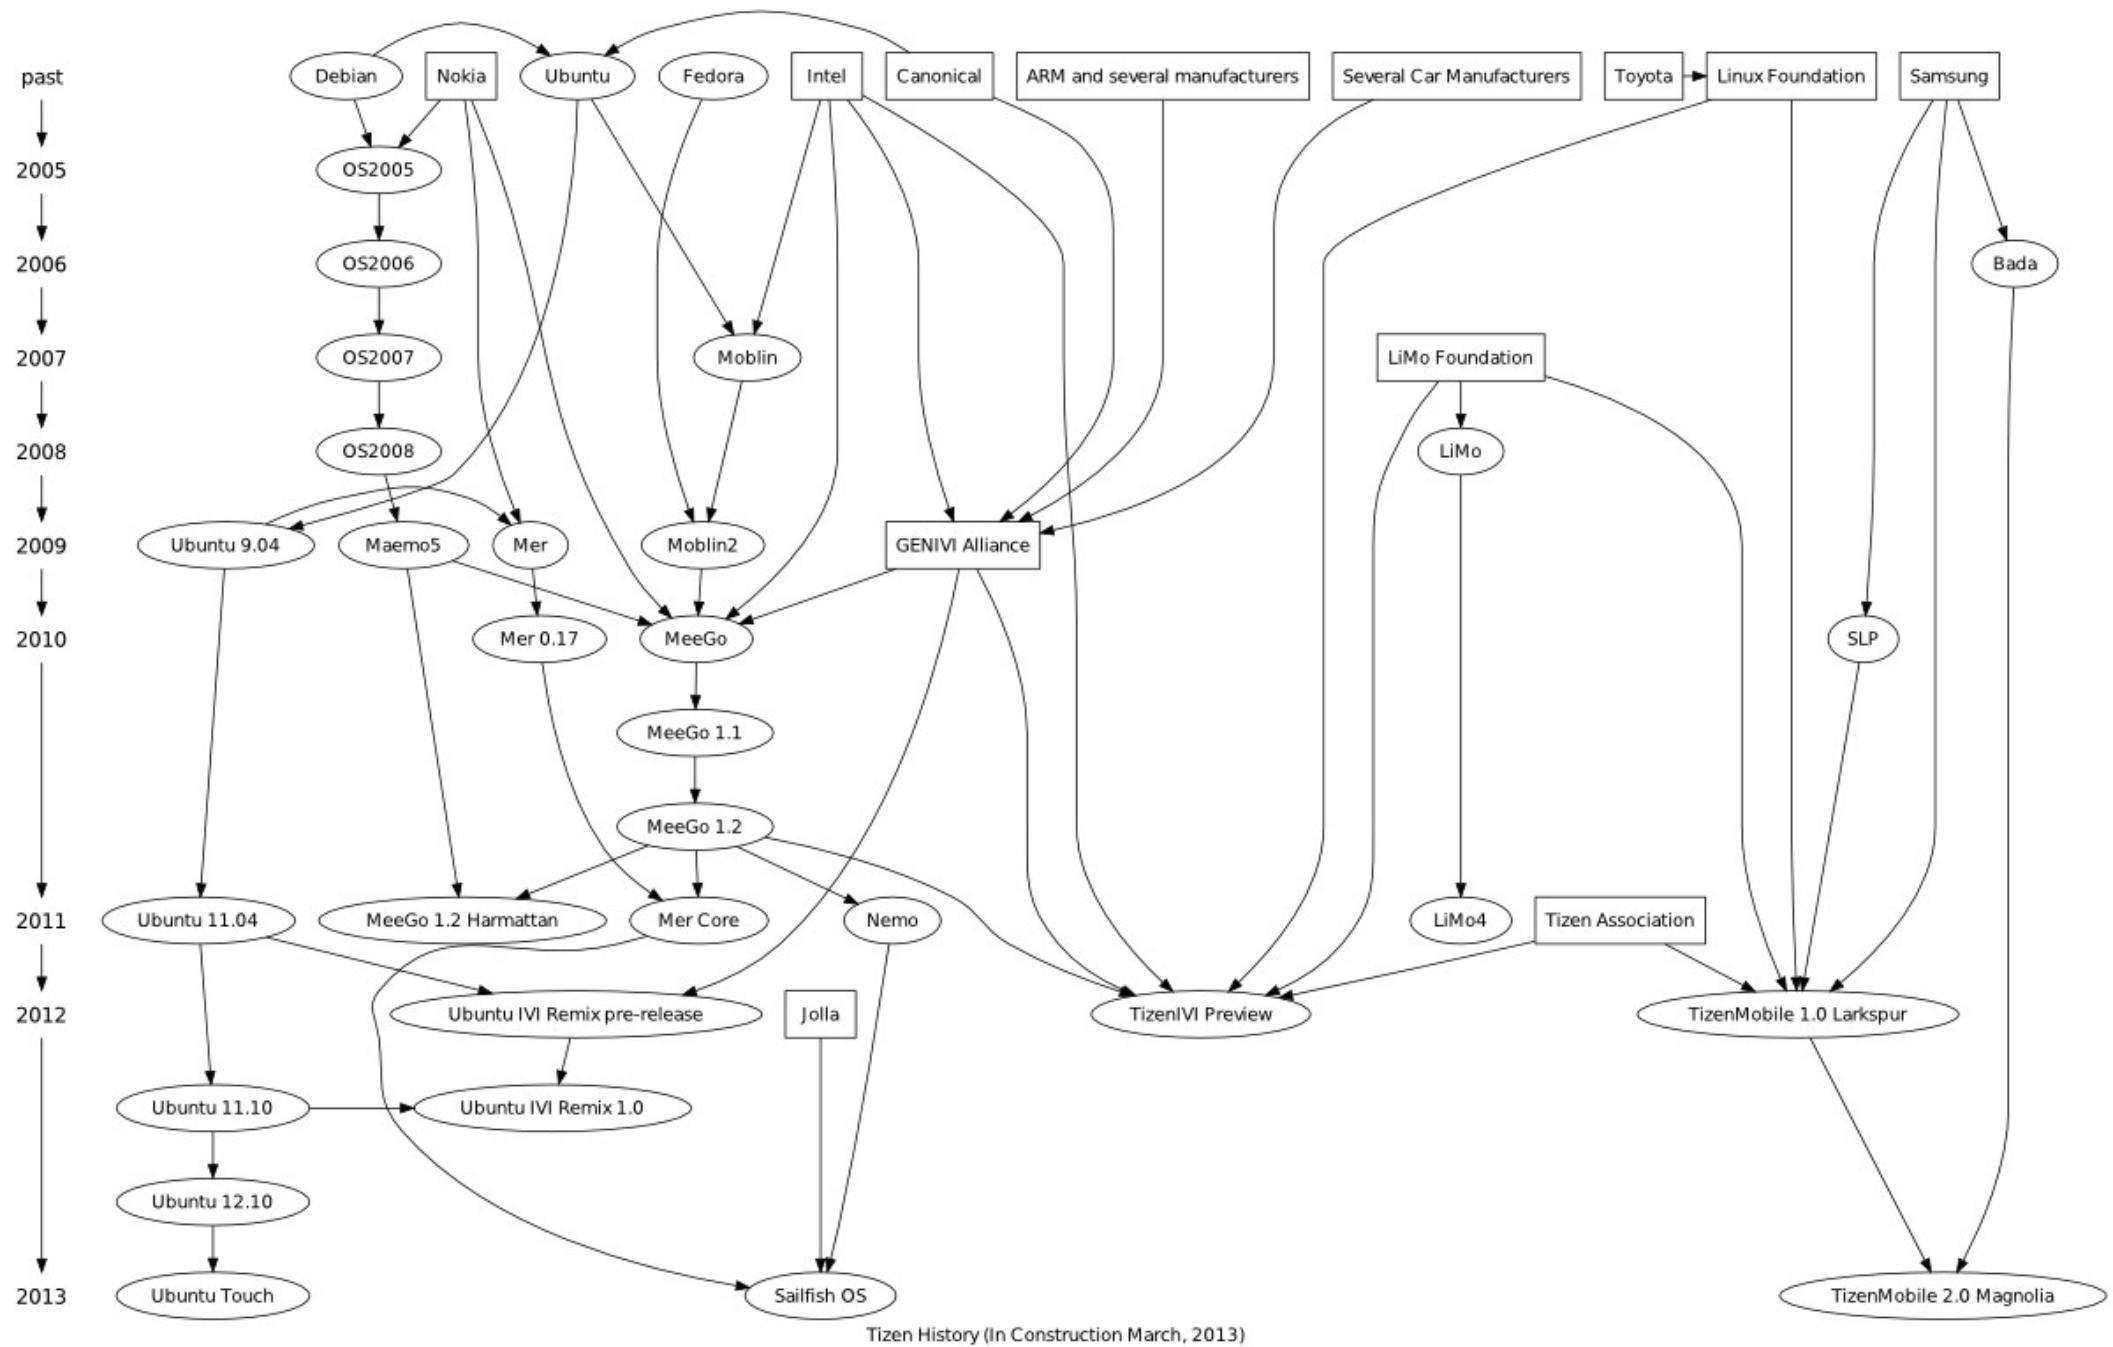

jolt4users

TOH – objektiv

Tizen History (In Construction March, 2013)

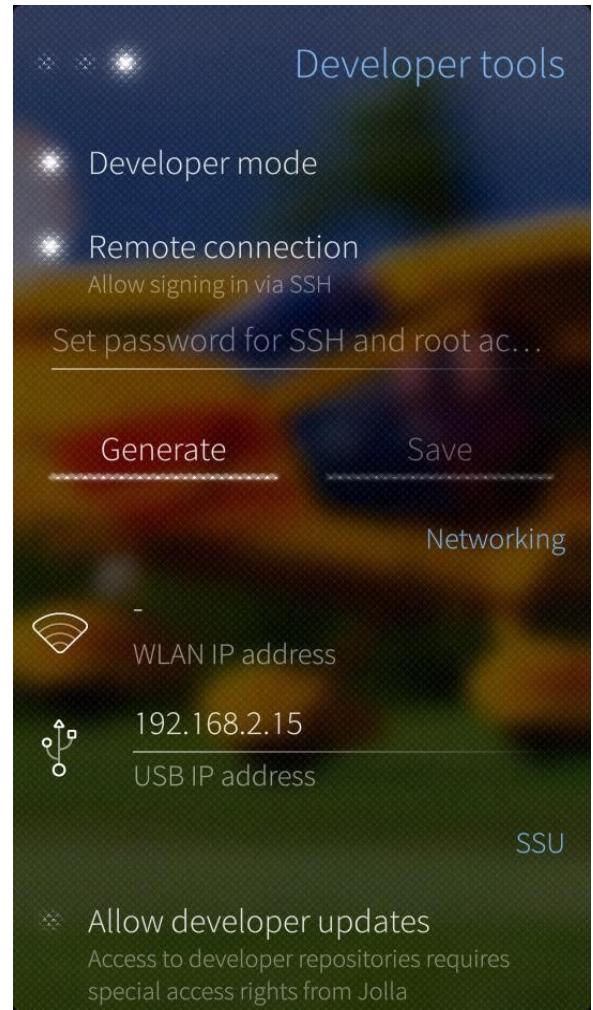

Software

- btrfs
- Wayland + libhybris + lipstick
- systemd
- Qt 5.1-git + Silica
- Android kernel 3.4
- Podpora Android VM 4.2

Applications

- Qt 5.2 + QML 2.0
 - C++
 - časem Python
- rpm
- vlastní UI komponenty
- systém ovládaný gesty

Official harbour policies

- žádné závislosti
- nepoužívat nefinální API
 - spousta funkcí nemá finální API
- všechno běží pod uživatelem nemo
- žádný cron/service file
- potřebujete-li knihovnu, bundlujte

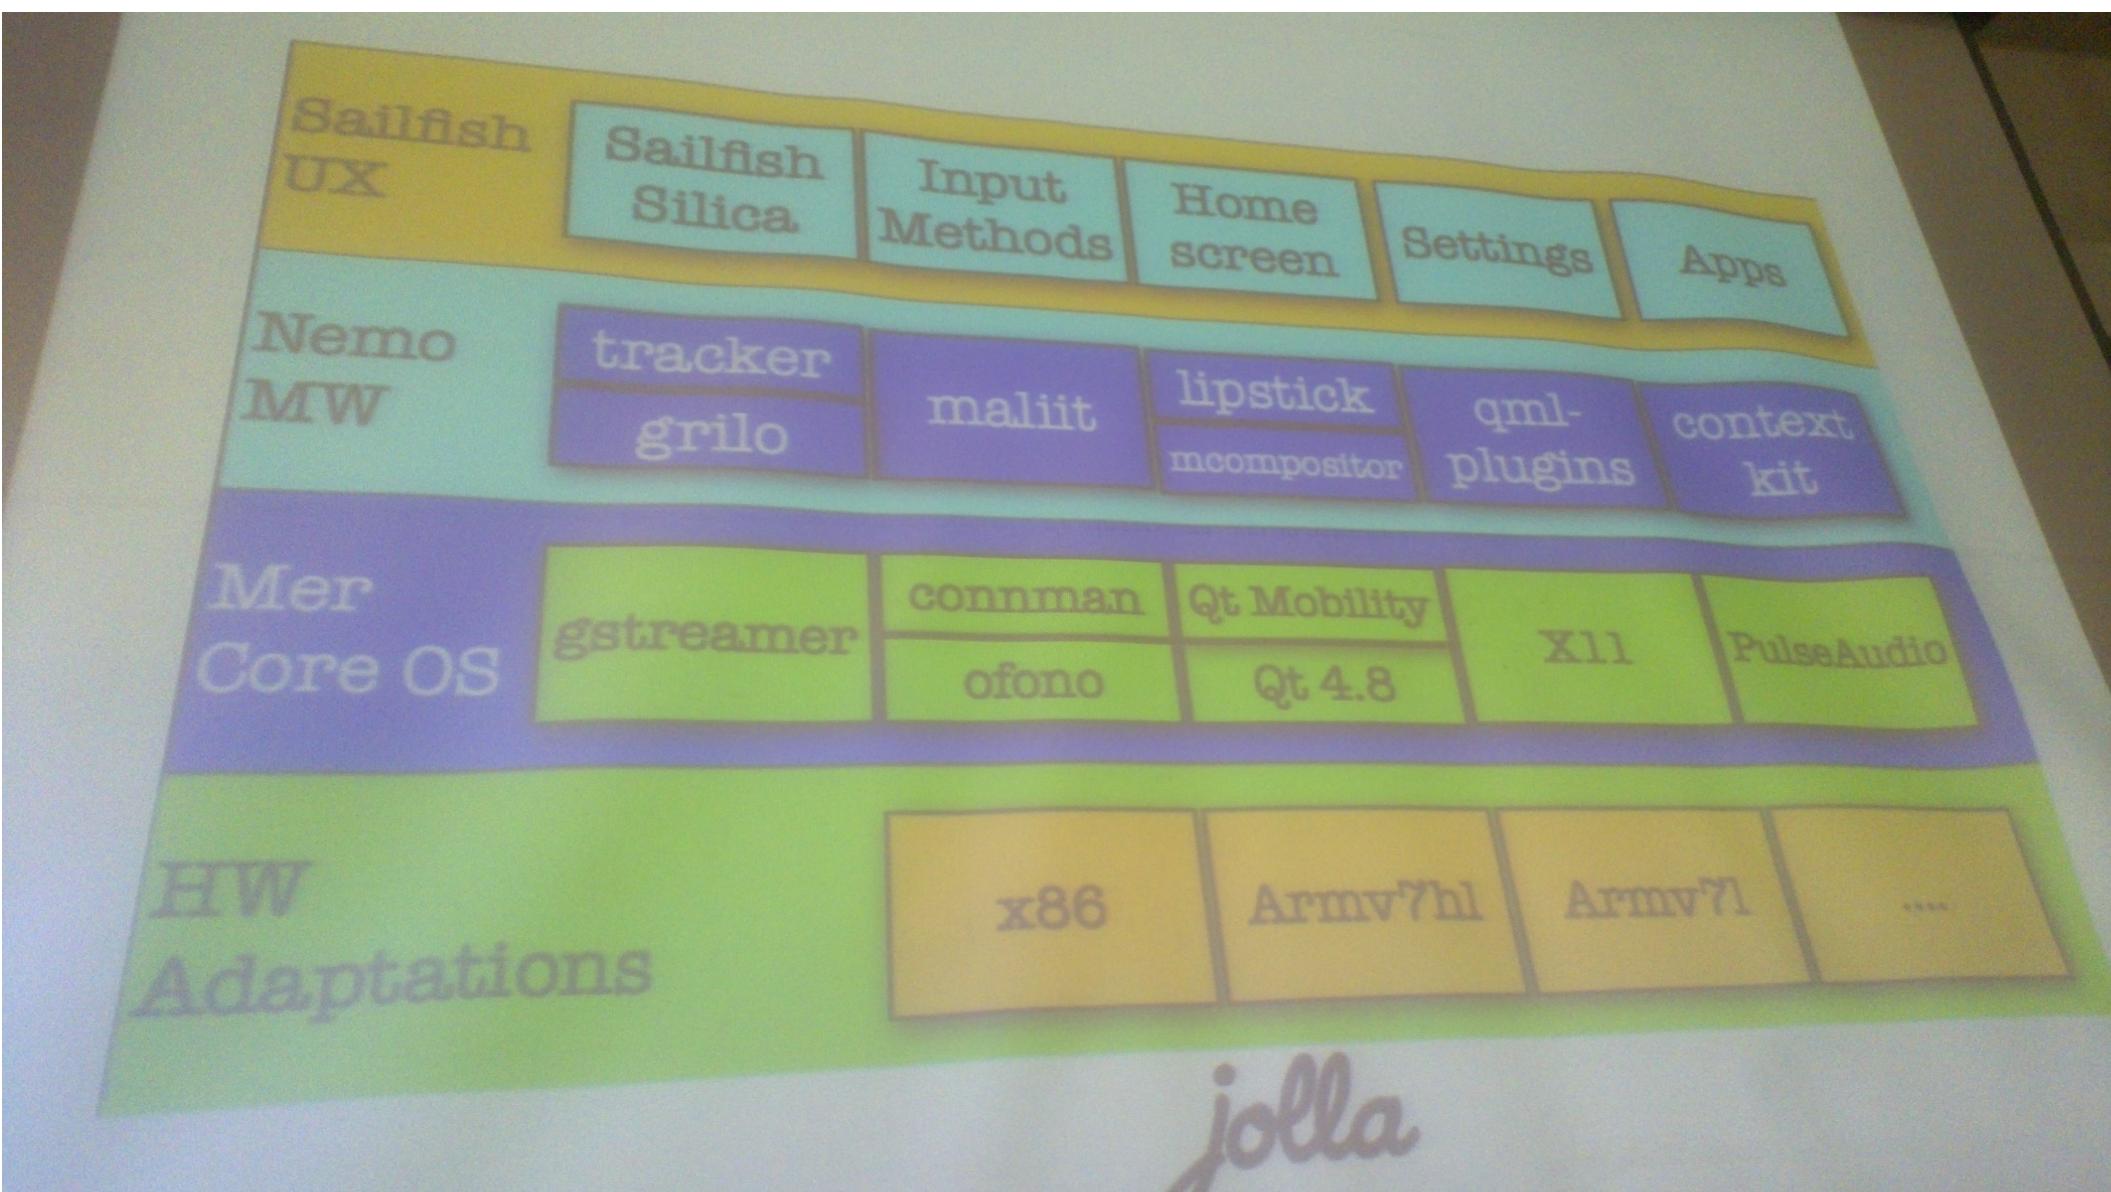

OpenRepos

- komunitní repositáře
- nahraj binární RPM a čekej
- žádné QA
- jen binárky, zdrojáky nejsou povinné
- klidně service, cron
- klidně sudo bez hesla pro každého...
- co uživatel, to repo

Make available OS images and flashing tools

18

recovery os firmware flashing images

Please make available tools for operating system recovery. The part of developer community may be scared to test their software because of risk of bricking the device without any chance to fix it. It would be nice to have everything with source code in future. The binary images could help some developers also.

 asked Jan 15 '14 by xmlich02 (486 karma)  http://www.fit.vutbr.cz/~...

As I understand there could be some business reason to not publish OS images and flashing tools. From business point of view, every contract could be modified. From engineering point of view, every OS/tooling part could be replaced with opened alternative.

For legal reasons that is not possible. But next update will have new recovery image which should lower the risk of bricking.

2 Legal reasons should be solved. Why it is not possible? Other companies does that.

Developer mode

- jedna položka v nastavení
- root out of the box
- devel-su
- ssh – po kabelu i wifi

The terminal window displays the following output:

```
bash-3.2$ ping6 ::1
PING ::1(::1) 56 data bytes
64 bytes from ::1: icmp_seq=1 ttl=64 time=0.122 ms
64 bytes from ::1: icmp_seq=2 ttl=64 time=0.336 ms
```

A virtual keyboard is overlaid on the terminal window, covering the bottom half of the screen. The keyboard layout is QWERTY and includes standard keys like esc, arrow keys, and function keys, along with additional symbols and numbers.
